Online Hackathon On Data Driven Innovation For Citizen Grievance Redressal

- Prateek Khanna

DataSets

- Public Grievance details in CPGRAMS along with feedback details
- Public Grievance movement details across the organization in CPGRAMS
- Monthly Department-wise public grievance receipts and disposals from January 2016 to Octorber 2019
- Department-wise receipts, disposal and pendency of Public Grievance detailed statistics from 01.01.2016 to 01.11.2019
- Details of registered users of CPGRAMS as on 24.10.2019
- CPGRAMS Nodal Public Grievance Officers Details as on 30th October 2019

Predictive Models

- The implementation falls under the category of Application Predictive Models.
- It makes use of the shared datasets and predicts future trends for the relevant metrics.
- The time series data is analysed Auto Regressive Integrated Moving Average(ARIMA) methodology.
- Data is populated in a MySQL database and java code is used for generating relevant csv files.
- These csv files are then used as input to a R program to generate future predictions.

Setup

- Source code repository : https://github.com/solfinder/predictivemodels
- Deployment steps: <u>https://github.com/solfinder/predictivemodels/blob/master/READM</u> <u>E.md</u>
- Java Class : MySqlCon1
- R module : darpg.r
- Time Series Predictive Model: ARIMA
- Prediction data output format: csv files containing data for future months

 Java Preprocessing Class MysqlCon1 connects to the database table containing raw data about grievance receipts and disposals and transforms it into a set of csv files organized by departments.

Conclusion

- The application makes use of ARIMA modelling in R to predict future datapoints.
- Details of the actual model characteristics for each series are also captured and reported for reference.
- Predicted data can be used for:
 - Optimum resource utilization
 - Reallocation of resources is required
 - Investment strategy formulation
 - Contingency planning
